Quiz # 5

Time Allowed: 25 minutes

Max Points: 25

Name: _____

QUESTION: Binary Search Tree

1. For the given set of nodes, construct a binary search tree:
 - Nodes = {H, L, I, E, N, B, C, K, P, D, F, G, O, Q, J, M, T}

2. Search for Node O in the BST constructed in part (1), by specifying its complete path including its directions:

Ans. _____

3. Search for the minimum in the BST constructed in part (1), by specifying its complete path including its directions:

Ans. _____

4. Find the successor of Node G in the BST constructed in part (1), by specifying its complete path including its directions:

Ans. _____

5. Find the predecessor of Node L in the BST constructed in part (1), by specifying its complete path including its directions:

Ans. _____

6. Delete the following nodes one after the other from the BST constructed in part (1). Redraw the tree to get complete grade for deletion steps. Use inorder successor wherever needed for deletion.

- a. Node J:

b. Node I:

c. Node L:

7. For the tree given below, write down its Linked Structure Representation:
