

Setting up IVPM2 on JIRA

- Visit: <https://www.atlassian.com/try>
- Under Jira, Click “Try Cloud”
- Select a name for your site
- Select “Software Management” and click away to use defaults till you click “Finish” that ends up setting up a scrum project.

Create Project

- New project (I will call it P for future reference)
- Kanban
- Company-managed

Create Custom Fields

1. Settings wheel on top-right -> Work Items
 - a. Click “Fields” on the left-pane
 - b. Click “Create new field” button on the top right
 - i. Field type: User Picker (multiple users)
 - ii. Name: Collaborators
 - iii. Click “Create”
2. Settings wheel on top-right -> Work Items
 - a. Click “Fields” on the left-pane
 - b. Click “Create new field” button on the top right
 - i. Field type: Select List (single choice)
 - ii. Name: Deep/Shallow?
 - iii. Description: Indicates the type of work based on Cal Newport’s terminology.
 - iv. Select Deep for cognitively demanding, focused work that creates
 - v. high value. Select Shallow for low-complexity, logistical, or
 - vi. administrative tasks that require less focus.
 - vii. Add Option: Deep
 - viii. Add Option: Shallow
 - ix. Click “Create”
 - c. For the newly created field “Deep/Shallow?” click three dots under “Actions” column
 - i. Edit field
 - ii. Edit options

- iii. Edit Default Value
 - iv. Select “Deep” as the value
 - v. Click “Set Default”
- 3. Settings wheel on top-right -> Work Items
 - a. Click “Fields” on the left-pane
 - b. Click “Create new field” button on the top right
 - i. Field type: Select List (single choice)
 - ii. Name: Task Size (<10min/>10min)
 - iii. Description: Indicates estimated effort size — “Small” for tasks expected to take less than 10 minutes, “Big” for those likely to take longer.
 - iv. Add Option: Small
 - v. Add Option: Big
 - vi. Click “Create”
 - c. For the newly created field “Task Size (<10min/>10min)” click three dots under “Actions” column
 - i. Edit field
 - ii. Edit options
 - iii. Edit Default Value
 - iv. Select “Big” as the value
 - v. Click “Set Default”

Create Custom Field Configurations

- 1. Settings wheel on top-right -> Work Items
 - a. Click “Field Configurations”
 - b. Click “Add field configuration” on top right
 - i. Name: GTD-JIRA-Workflow Task Configuration
 - ii. Description: Field configuration for GTD-JIRA-Workflow Tasks
 - iii. Click “Add”
- 2. Settings wheel on top-right -> Work Items
 - a. Click “Field Configurations”
 - b. Click “Add field configuration” on top right
 - i. Name: GTD-JIRA-Workflow Epic Configuration
 - ii. Description: Field configuration for GTD-JIRA-Workflow Epics
 - iii. Click “Add”
- 3. Settings wheel on top-right -> Work Items
 - a. Click “Field Configurations”
 - b. Click “Configure” in front of “GTD-JIRA-Workflow Epic Configuration”
 - c. Search “Components” field, toggle “Required” to make it a required field for epics

4. Settings wheel on top-right -> Work Items
 - a. Click “Field Configurations”
 - b. Click “Add field configuration” on top right
 - i. Name: GTD-JIRA-Workflow Sub-Task Configuration
 - ii. Description: Field configuration for GTD-JIRA-Workflow Sub-Tasks
 - iii. Click “Add”

Create Custom Field Configuration Scheme

1. Settings wheel on top-right -> Work Items
 - a. Click “Field Configuration scheme”
 - b. Click “Add” a new field configuration scheme
 - i. Name: GTD-JIRA-Workflow Field Configuration Scheme
 - ii. Description: Contains custom fields for GTD workflow
 - iii. Click “Add”
 - c. In the new page: “Configure .. : GTD-JIRA-Workflow Config Scheme”
 - i. Click “Associate a work type with a field configuration”
 1. Issue Type: Sub-Task
 2. Field Configuration: GTD-JIRA-Workflow Sub-Task Configuration
 3. Click “Add”
 - ii. Click “Associate a work type with a field configuration”
 1. Issue Type: Task
 2. Field Configuration: GTD-JIRA-Workflow Task Configuration
 3. Click “Add”
 - iii. Click “Associate a work type with a field configuration”
 1. Issue Type: Epic
 2. Field Configuration: GTD-JIRA-Workflow Epic Configuration
 3. Click “Add”

Associate the New Field Configuration Scheme to this Project

1. Project Settings of P
 - a. Work items -> Types -> Actions (Top right) -> Edit Work Types
 - b. From “Issue Types for Current Scheme”,
 - i. move “Story” and “Bug” to “Available Issue Types”

2. Project Settings of P

- a. Work items -> Fields -> Actions (Top right) -> “Use a different scheme”
- b. Select “GTD-JIRA-Workflow Field Configuration Scheme”
- c. Click “Associate”

Make Custom Fields Editable in List Views

1. Settings wheel on top-right -> Work Items -> Fields
 - a. "Deep/Shallow?" -> Actions Column dots -> "Add field to screen"
 - i. Select Kanban Bug Screen and Kanban Default Issue Screen
 - b. "Task Size (<10min/>10min)" -> Actions Column dots -> "Add field to screen"
 - i. Select Kanban Bug Screen and Kanban Default Issue Screen

Create Custom Workflows

1. Settings wheel on top-right -> Workflows -> Add workflow
 - a. Name: Epic GTD-JIRA Workflow
 - b. Description: Workflow for Epics in GTD-JIRA-Workflow.
 - c. Click Create
2. Settings wheel on top-right -> Workflows -> Add workflow
 - a. Name: Task GTD-JIRA Workflow
 - b. Description: Workflow for Tasks in GTD-JIRA-Workflow.
 - c. Click Create
3. Settings wheel on top-right -> Workflows -> Add workflow
 - a. Name: Sub-Task GTD-JIRA Workflow
 - b. Description: Workflow for Sub-Tasks in GTD-JIRA-Workflow.
 - c. Click Create

Create Custom Workflow Scheme

1. Settings wheel on top-right -> Workflow Schemes -> Add Workflow Scheme (top-right)
 - a. Name: GTD-JIRA Workflow Scheme
 - b. Description: Workflow scheme for GTD-JIRA-Workflow.
 - c. Click Add
2. Settings wheel on top-right -> Workflow Schemes
 - a. Expand "Inactive"
 - b. Click "Edit" in front of GTD-JIRA Workflow Scheme
 - c. "Add Workflow" -> "Add Existing"
 - i. Select "Epic GTD-JIRA Workflow" -> Next -> Select "Epic" -> Finish
 - d. "Add Workflow" -> "Add Existing"
 - i. Select "Task GTD-JIRA Workflow" -> Next -> Select "Task" -> Finish
 - e. "Add Workflow" -> "Add Existing"
 - i. Select "Sub-Task GTD-JIRA Workflow" -> Next -> Select "Sub-Task" -> Finish

Edit the Custom Workflow to Have Our Statuses

1. Settings wheel on top-right -> Workflow -> Inactive Workflows
 - a. In front of "Task GTD-JIRA Workflow"
Click "..." under Actions column -> Click "Edit"
 - b. Add the following statuses:
 - 01 - DONE
 - 02 - IN PROGRESS CRITICAL IN FIRST HALF
 - 03 - IN PROGRESS CRITICAL TODAY
 - 04 - IN PROGRESS MUST TODAY
 - 05 - TODO TODAY
 - 06 - TODO IN 3 DAYS
 - 07 - TODO THIS WEEK
 - 08 - BACKLOG PROCESSED
 - 09 - BACKLOG PROCESS TODAY
 - 10 - BACKLOG UNPROCESSED
 - c. Click the arrow-line named "Create" that goes from black circle to "Open"
 - i. Make its arrow to terminate it at the status:
10 - BACKLOG UNPROCESSED
 - d. Select "Open"
 - i. Click "Remove Status" and follow through to delete it
2. Settings wheel on top-right -> Workflow -> Inactive Workflows
 - a. In front of "Sub-Task GTD-JIRA Workflow"
 - b. Click "..." under Actions column -> Click "Edit"
 - c. Add the following statuses:
 - 01 - DONE
 - 02 - IN PROGRESS CRITICAL IN FIRST HALF
 - 03 - IN PROGRESS CRITICAL TODAY
 - 04 - IN PROGRESS MUST TODAY
 - 05 - TODO TODAY
 - d. Click the arrow-line named "Create" that goes from black circle to "Open"
 - i. Make its arrow to terminate it at the status:
05 - TODO TODAY
 - e. Select "Open"
 - i. Click "Remove Status" and follow through to delete it
3. Settings wheel on top-right -> Workflow -> Inactive Workflows
 - a. In front of "Epic GTD-JIRA Workflow"
 - b. Click "..." under Actions column -> Click "Edit"
 - c. Add the following statuses:
 - 01 - DONE
 - 08 - BACKLOG PROCESSED
 - d. Click the arrow-line named "Create" that goes from black circle to "Open"

- i. Make its arrow to terminate it at the status:
08 - BACKLOG PROCESSED
- e. Select “Open”
 - i. Click “Remove Status” and follow through to delete it

Associate Custom Workflow Scheme to Our Project

1. Project Settings of P
 - a. Workflows -> Click “Switch Scheme”
 - b. Select Scheme: GTD-JIRA Workflow Scheme
 - c. Click Associate
 - d. Click Associate again if it shows the window saying existing statuses need to be shifted
 - e. Click Acknowledge

Create Filter “01 - Inbox”

Filters: Search Work Items

Select JQL

Enter the following JQL query (enter your project’s name instead of <name-of-project>):

```
project = <name-of-project> AND issuetype = Task AND labels != plan AND ((status = "10 - BACKLOG UNPROCESSED" AND (parent IS EMPTY OR due date IS EMPTY)) OR (status = "09 - BACKLOG PROCESS TODAY" AND parent IS EMPTY))
```

Click “Save filter”

Name: 01 - Inbox

Description:

First step of the daily ritual:

1-Enter epic names in "Parent" column to which these tasks belong to

--if epic already exists, use that

--otherwise create new epic

2-Sort the list according to epic names

3-Enter a later date for tasks you don't want to process today

4-Refresh the page so deferred tasks disappear

5-For remaining tasks change the status to

"09 - BACKLOG PROCESS TODAY"

Viewers:

Select “Project”,

Choose your project,

Select “Administrators”

Click “Add”

Click “Save”

Add/Delete Columns in the table of tasks on the screen so that this following set of columns are visible in this order:

Work

Parent

Status

Due date

Reporter

Created

Create Filter “02 - Review Deferred Inbox”

Filters: Search Work Items

Select JQL

Enter the following JQL query (enter your project’s name instead of <name-of-project>):

project = <name-of-project> AND issuetype = Task AND status = "14 - BACKLOG UNPROCESSED"
AND due <= endOfDay()

Click “Save filter”

Name: 02 - Review Deferred Inbox

Description:

This is the second step of the daily ritual:

This is all the tasks whose processing was deferred to today's date:

1-For tasks you want to defer processing further:

--add a later date

2-Refresh the page for these tasks to be gone

3-For remaining tasks (i.e. those you want to process today),
change the status to "09 - BACKLOG PROCESS TODAY"

Viewers:

Select “Project”,

Choose your project,

Select “Administrators”

Click “Add”

Click “Save”

Add/Delete Columns in the table of tasks on the screen so that this following set of columns are visible in this order:

Work

Parent

Status
Due date
Reporter
Created

Create Filter “03 - Process Backlog”

Filters: Search Work Items

Select JQL

Enter the following JQL query (enter your project’s name instead of <name-of-project>):

```
project = <name-of-project> AND  
issuetype = Task AND  
labels != plan AND  
(  
  status = "09 - BACKLOG PROCESS TODAY" OR  
  (  
    NOT (status = "09 - BACKLOG PROCESS TODAY" OR  
      status = "10 - BACKLOG UNPROCESSED") AND  
    (  
      "Deep/Shallow?[Dropdown]" IS EMPTY OR  
      assignee IS EMPTY OR  
      "Task Size (<10min/>10min)[Dropdown]" IS EMPTY OR  
      fixVersion IS EMPTY OR  
      duedate IS EMPTY  
    )  
  )  
)
```

Click “Save filter”

Name: 03 - Process Backlog

Description:

This is the third step of the daily ritual:

This is the list of all tasks you want to process today:

1-Sort by Parent

2-Enter the following attributes for all these tasks (prefer built-updates):

Components

Fix Versions

Due Date

Story Points

Assignee

Deep/Shallow?

Task Size (<10min/<10min)

4a- (Optionally) If this is part of the current sprint - mention that in the Sprint field

4b- (Optionally) If there are more than one people responsible for the task, add other in “Collaborators”

5-Change the status of the tasks to one of the following tasks depending on urgency:

02 - IN PROGRESS CRITICAL IN FIRST HALF

03 - IN PROGRESS CRITICAL TODAY

04 - IN PROGRESS MUST TODAY

05 - TODO TODAY

06 - TODO IN 3 DAYS

07 - TODO THIS WEEK

08 - BACKLOG PROCESSED

For saving time, you may want to only assign 05 or 08, and defer final urgency level assignments to Kanban Boards.

Viewers:

Create Filter “04 - Process Planned Tasks”

Filters: Search Work Items

Select JQL

Enter the following JQL query (enter your project's name instead of <name-of-project>):

```
project = <name-of-project> AND
issuetype = Task AND
labels = plan AND
(status = "10 - BACKLOG UNPROCESSED" OR
(
  NOT (status = "09 - BACKLOG PROCESS TODAY" OR
    status = "10 - BACKLOG UNPROCESSED") AND
  (
    "Deep/Shallow?[Dropdown]" IS EMPTY OR
    assignee IS EMPTY OR
    "Task Size (<10min/>10min)[Dropdown]" IS EMPTY OR
    fixVersion IS EMPTY OR
    dueDate IS EMPTY OR
    "Story Points[Number]" IS EMPTY
  )
)
)
```

Click “Save filter”

Name: 04 - Process Planned Tasks

Description:

This step is performed after tasks have been entered in the "Timeline" view of the "Sprint Planning" board. This filter lists all tasks labeled "plan" and status "10 - BACKLOG UNPROCESSED". Here we will update any missing fields (Sprint and Collaborators are optional). After that we change the status to "08 - BACKLOG PROCESSED".

Viewers:

Create Kanban Board “Action: Today”

1. Create Kanban board:
2. Name this board: “Action: Today”
3. Choose what to include in this board: Work Type
Work Type: Task, Sub-task
4. Board Settings -> Layout -> Columns

5. Edit to have the following columns:

6. Before you move forward it's good to create a Task and Sub-task that appears on the board:

- a. Click "Create a work item"
 - i. Status: "05 - TODO TODAY"
 - ii. Summary: "dummy task"
 - iii. Click "Create"
- b. Click the task that just got created
 - i. Click "+" button in front of "Subtasks" to create a sub-task inside this Task
 - ii. Type: "dummy sub-task" as the name of the task and press enter

7. Click on the "dummy sub-task" just created to open the Sub-task screen

- a. On the right, scroll down to expand "More fields"
- b. Hover on the following fields then click on the Pin  to pin them on top
 - i. Original estimate
 - ii. Time Spent

8. Board Settings -> Layout

- a. Swimlanes
 - i. Select method: Epics
- b. Card colors
 - i. Select method: Work Types
 - ii. Choose your preferred colors for Task and Subtask
- c. Card Layout
 - i. Under "Kanban board"
 - ii. Click "+ Add field" to add the fields:
 1. Original estimate
 2. Time Spent
