

## Lab-6

Syed M. Asad Ali (sa09475)

- Asset class with added “Mass” and “Units” attributes in the Schema Editor

Schema Editor interface showing the 'Edit Asset Class' form. The form includes fields for Name, Description, Hidden, Parent, and Abstract. Below these is a table for Attributes with columns: Attribute Name, Type, Order, Choices, and Default. The table contains two rows: 'Mass' with Type 'NUMBER' and Order '1', and 'Units' with Type 'TEXT', Order '2', and Default 'kg'. There is also a 'Target Relations' section with a dropdown set to 'alternative' and an 'Add Target' button. On the left, a 'Metadata' sidebar shows a circular chart and various identifiers.

- Created Rover (ROV.1) Asset with metadata, description, and relationships.

Schema Editor interface showing the 'Rover' asset details. The 'Attributes' section shows fields for Number (ROV.1), Name (Rover), and a rich text description. The description includes a list of primary instruments: Near Infrared Spectrometer, Neutron Spectrometer, Drill, Oxygen&Volatile Extraction Node, Lunar Advanced Volatile Analysis, and Isotope Measurement of Volatile. It also lists other instrument candidates: Radiation monitor, Seismometer, Heat flow measurement, Spectro-microscope camera, and Active x-ray spectrometer. The 'Mass' attribute is set to 349 and 'Units' to kg. On the right, the 'Relationships' section shows various connections like 'connected by Connection', 'decomposed by Children', 'decomposes Parents', 'performs Action 2', 'sourced by Artifact', and 'traced from Statement'. On the left, a 'Metadata' sidebar shows a small image of the rover and various identifiers.

- Added label “Rover” and organized rover entities.

The screenshot shows the 'Edit Rover. Label' form in the cloud.innoslate.com interface. The form has the following fields:

- Name:** Rover
- Description:** Used to clarify possible rover options.
- Class(es):** Asset
- Hidden:** No
- Parent:** (empty)

The sidebar on the left displays a pie chart and the following metadata:

- Identifier:** 38250
- Parent:** None
- Modified:** 16/10/2025 by a5ad
- Created:** 16/10/2025 by a5ad
- Project Id:** 3772

- ATHLETE Rover (ROV.2) Asset with metadata, description, and relationships.

The screenshot shows the 'ATHLETE Rover' entity page in the cloud.innoslate.com interface. The page includes the following sections:

- Attributes:**
  - Number:** ROV.2
  - Name:** ATHLETE Rover
  - Body:**

JPL leads the development of the ATHLETE (All-Terrain Hex-Legged Extra-Terrestrial Explorer) robotic vehicle. Other team members include NASA's John and Ames Centers, Stanford University, and Boeing. ATHLETE is capable of rolling over undulating moon-like terrain and "walking" over extremely rough or steep terrain so that the rough surface of the moon can load, transport, manipulate, and deposit payloads.

The first version of the ATHLETE vehicle is the ability to dock with special-purpose device, including a launchable / releasable grappling hook, refueling stations, excavation implements. Development plans for future versions include the ability to move 100 times faster than the Mars Exploration Rovers and traverse almost any terrain, including vertical rock faces or sandy slopes at the angle of repose by using a launchable / releasable grappling hook.
