UND.1 User Needs Document with decomposition

The screenshot shows the cloud.innoslate.com interface. The main area displays a 'New Requirement' document. The document has a title '1 New Requirement' and a body with a text area. The left sidebar shows metadata for the document, including Global ID, ID, Class, Statement, Created, and Labels. The right sidebar shows a hierarchy of requirements.

Statement

Relabeled WtMB.1, Quality Checker (100%)

The screenshot shows the cloud.innoslate.com interface. The main area displays a 'Relabeled WtMB.1, Quality Checker (100%)' document. The document is a table with columns: Rationale, Quality Score, and Labels. The table lists various requirements and their quality scores. The left sidebar shows a filter for 'All Document Entities' and a list of labels. The right sidebar shows a hierarchy of requirements.

Hierarchy

Extracts from Welcome to Moon...

	Rationale	Quality Score	Labels
WMB.1.1.6 Oxygen from Regol...	N/A	N/A	Objective
Moonbase's first 'export' product was oxygen derived from the regolith.			
WMB.1.1.6.1 Extract Oxygen	Oxygen is a critical resource to obtain from the Moon's surface.	100%	Functional Requirement
The system shall extract oxygen from the Moon's regolith.			
WMB.1.1.6.2 Contain Oxygen	To ensure a breathable atmosphere and sustained life support by maintaining adequate oxygen levels through on-board oxygen extraction. The system shall contain oxygen extracted.	0%	No labels to display.
The system contains oxygen extracted.			
WMB.1.1.7 Construction and R...	N/A	N/A	Objective
Construction materials and raw materials for orbital factories follow afterward.			
WMB.1.1.7.1 Provide raw materials	Raw materials include ore from drillings, as well as regolith.	100%	Functional Requirement
The system shall provide raw materials to Low Earth Orbit factories.			
WMB.1.1.7.2 Provide construction ...	Constructions materials will have to be processed from raw materials on the Moon.	100%	Functional Requirement
The system shall provide construction materials to Low Earth Orbit factories.

D.1

Name

ating construction materials on the Mo

Description

Body

We need to determine the feasibility of creating the kinds of construction materials needed for space stations in orbit around the Earth, Moon, and other locations.

Justification

This long-term requirement will drive costs and reduce the potential

Assumptions

1. We know what kinds of

Entity	Labels	Id
D.1 Feasibility of creating construction materials on the Moon	No labels to display.	5468652
D Key Project Management Decisions	No labels to display.	5468201
D.2 Add mass and units to the Asset Class	No labels to display.	5445552
D.3 Slip Phase 1 Schedule due to Lack of Lander	No labels to display.	5446407

Key Project Management Decisions

Description

Body

Decisions on how we adjusted the schema and modeling to meet the specific requirements of this project.

Justification

Documentation of these decisions will aid in future development of the

Assumptions

Idea is backed by all team members.

I.1

Name

Feasibility of creating construction mat

Description

Body

Knowing whether or not we can construct valuable and useful materials that can support construction in space is critical to the success of this project.
